

[How-To] Install HAProxy on Ubuntu 24.04 LTS

Purpose

Purpose description.

Prerequisites

List of prerequisites:

- Root user or sudo user
- Debian 12 LXC or VM

Instructions

Step 1: Update and Install HAProxy

Install haproxy

```
sudo apt update
sudo apt install -y haproxy
```

Step 2: Enable and Start the HAProxy Service

Now that HAProxy is installed, you can enable the service and start the service:

```
sudo systemctl enable haproxy
sudo systemctl start haproxy
```

Then, check on the status of HAProxy:

```
sudo systemctl status haproxy
```
